LONG ISLAND

TRENDING East and West, is cooled in Summer by the south winds from the Ocean. A great diversity of Nature's attractions makes it positively unique. Modern schoolhouses, improved highways, pure air, artesian-well water and perfect drainage together with its situation, adapts it perfectly for permanent residence, the summer's sojourn, the cruise, the hunting or fishing trip, in fact, any land or water sport. Fast trains, first-class equipment, dustless road-bed and frequent service, and in addition telegraph and telephone brings every point on Long Island into close touch with Greater New York. The following reproductions from photographs, show some of the Island's attractions. For hotel and boarding house lists, time tables, descriptive matter and other details, address :
